

NEXUS 10118 Clarity Antiblock

This product is formulated, designed and manufactured specifically for the thin gauge film marketplace where retention of optical properties of the base resin is desired.

Nexus 10118 clarity antiblock is a concentrate containing 20% loading of a proprietary antiblock in a polyethylene based carrier resin. It is designed to impart an antiblock effect in the thin gauge film market, however, it has been successfully used in film of all gauges. This antiblock reduces haze approximately 25% while maintaining a premium antiblocking characteristic to the film. Films formulated with 10118 exhibit high film clarity, low coefficient of friction and excellent stability due to its low interaction with stabilizers, slip agents and processing aids.

Typical Properties

Nexus 10118 will comply with the following specifications when using an appropriate resin and manufacturing conditions: FDA title 21 178.3130
